(54) Title: **DEVICE AND METHOD FOR DISPLAYING INFORMATION**

(57) Abstract: A device for displaying information, comprising at least one display stand (10) and a transfer unit (17) wirelessly connected to associated display stands. The display stand supports a plurality of displays (11) positioned adjacent to one another, and comprises a control unit (16). The control unit (16) comprises communication means (34) for communication with the transfer unit, memory means (33) for storing information to be shown during at least one display sequence and a drive unit (36) for the displays (11). The control unit (16) is arranged for transferring different information to different sets of displays simultaneously for simultaneous showing on the displays. The transfer unit is arranged for intermittently transferring information corresponding to a display sequence to any display stands associated with the transfer unit. The invention also relates to a system for displaying information on a plurality of sites, comprising a central storing unit (24) and at least one display stand (10) on each site. The central storing unit (24) is connected to at least one transfer unit (17), being arranged to establish contact with the central storing unit (24) intermittently to retrieve information.
